ENJOY YOUR TOMATOES!

Plants will be available for pick up at Lincoln Land Community College during the last two weeks of April.

If you are not part of the LLCC community, you may also arrange pick up from the person you place your order with.

All plants are indeterminate varieties, except Silvery Fir Tree. It is determinant and a good choice for container growing. The "Produce in..." dates are approximate and represent days from planting the seed to the first ripe tomatoes. All seeds were planted in mid-March. If you would like additional information on specific tomatoes, descriptions of these varieties can be found on line in the following catalog:
